## **FOR IMMEDIATE RELEASE**

### ***Lighting The Way – The Model RH/RHX Bin Level Indicator!***

*United States – June 22, 2012* - “The Model RH is the ONLY economical rotary paddle bin level indicator that incorporates locally visible high intensity LED indication as a standard feature”, according to Joe Lewis, Managing Director at BlueLevel Technologies, Inc., located at 105 W. 16<sup>th</sup> Street in Rock Falls, IL. “This is a unique feature for this class of bin level indicator.” Combining the local indication of the alarm status with four shaft bearings, a DPDT relay output that is fail-safe on power failure, automatic motor shutoff and many other features makes this bin level indicator truly unique! “Along with an economical cost these great unique features makes the Model RH the best value available today in bin level indicators”.

Rotary paddle technology is the most resilient technology used to detect the presence and absence of a wide variety of powders and bulk solids. Since their inception in the 1930’s these mature bin level indicators are the most universal in their use, easy to understand, reliable and provide very high value.

BlueLevel Technologies offers the Model RH for ordinary electrical locations and the Model RHX for hazardous areas. Please visit the BlueLevel Technologies innovative website at [www.blueleveltechnologies.com](http://www.blueleveltechnologies.com).
